Summary

Software Engineering graduate specializing in AI/ML Engineering, with hands-on experience building LLM-powered systems including agentic RAG pipelines, fine-tuned sentiment models, and AI-driven recommendation engines. Proficient in Python, LLM APIs (Groq, Gemini), vector search, and cloud deployment, with a strong foundation in building end-to-end intelligent applications from research to production.

Experience

CENTech, NESCOM — Islamabad

Aug 2025 - Oct 2025

DevOps Automation Intern

- Worked with Azure DevOps Services to manage development workflows.
- Automated CI/CD pipelines to streamline build and deployment processes.
- Utilized Python scripting for automation and task optimization.

Cofttech.ai — Remote

Jul 2025 - Sep 2025

Frontend Developer

- Developed user interfaces using React.js for responsive web applications.
- Focused on UI/UX design to improve user experience and engagement.
- Collaborated remotely with team members to deliver frontend features.

128 Technologies — Islamabad

Jul 2023 - Aug 2023

UI Designer

- Designed user interfaces with a focus on usability and visual consistency.
- Worked on the UI/UX principles to enhance the overall product design.

Education

Bachelor of Science in Software Engineering, Air University Islamabad

2022 - 2026

Projects

InsightAgent - Agentic RAG & Multi-Source Research Assistant

- Multi-source agentic research platform featuring LangGraph state orchestration, dynamic query routing (ChromaDB vs. Tavily Web Search), LLM-based relevance self-correction, factual conflict detection between stale and live data, and real-time SSE execution tracing.

Buyonix AI-Powered Smart E-Commerce Platform

FYP Project

- AI-powered e-commerce platform with SVD-based product recommendations, MobileNetV2 visual search, Gemini-powered price negotiation, TF-IDF based AI semantic search with spelling correction, and an agentic RAG chatbot (Gemini Function Calling) for bilingual product/stock lookups.

CodeMentor AI - AI-Powered Code Review & Mentor Platform

- Built an AI-powered code review platform using Groq API (Llama 3.3/3.1) that analyzes code quality and security vulnerabilities, generates grading metrics (A+ to F), and includes a Socratic AI Mentor chatbot with sandboxed code execution.

AI Study Assistant - Adaptive Learning Platform

- Developed an intelligent study platform featuring RAG-based document analysis, a local vector search engine, automated quiz generation via Groq API, and an SM-2 spaced repetition engine to optimize active learning.

ReviewSense AI - Product Review Sentiment Analysis & Brand Intelligence Platform

- Built a secure sentiment analysis platform using a locally fine-tuned BERT model for review classification and Groq-powered LLM (Llama 3.1) for conversational review insights, with 2FA authentication, JWT-based session security, and PDF/CSV report export.

Additional Skills

Python, Machine Learning, Deep Learning, TensorFlow, Scikit-learn, NLP, LLMs, RAG, Groq API, Prompt Engineering, Vector Search, Computer Vision, Azure, Docker, CI/CD, Git.
